INT. J. SYSTEMS SCI., 1992, VOL. 23, NO. 12, 2419–2125

SUBJECT INDEX (Vol. 23)

Abstract system theory, topological approach, 329
Actuators, saturating, in time delay system stabilization, 615
Algorithm
  approximation type, for performance modelling of integrated assembly line system with inspection stations and finite capacity local storages, 1637
  bi-criterion type, for minimizing machine interference and reducing job waiting time, 1229
  for identification of linear multivariable time-invariant systems from samples of input–output data, 419
  for identification of multi-class linear and non-linear systems, 1603
  for parameter estimation, orthogonal least-squares type, for non-linear stochastic systems, 1019
  for parameter estimation of bilinear and non-linear systems using Walsh functions, recursive approach, 283
  for parameter estimation, orthogonal-type for complex number systems, 1011
  for reducing the minimal realization problem of 2D systems to system of bilinear equations, 545
  generalized realizations with special coordinate for matrix fraction descriptions, 2197
  modified recursive least-squares type, for parameter identification, 187
  prediction-error estimation type, for reconstruction of linear and non-linear continuous time models from frequency response data, 1533
  sensitivity analysis of stochastic dynamical systems, 2187
Algorithms,
  decentralized smoothing type, of continuous-time systems in distributed-sensor networks, 1237
  recursive, computational, for set of block pulse operational matrices, 1921
  spatially recursive, for adaptive estimation of two-dimensional non-causal and non-stationary simultaneous autoregressive model parameters, 1033
  system theoretic, digital simulation, applied to image compression, 1155
Approximation of nonlinear functionals via general orthogonal polynomials and application to control problems, 1261
Assembly line system, integrated, with inspection stations and finite capacity local storages, performance modelling, approximation algorithm, 1637
Assembly machines, three, in manufacturing system, optimal control, 2405

Beam, flexible, model controllability and flexibility, 2349
Bidiagonal realization for multivariable systems, 249
Block pulse operational matrices, set of, recursive computational algorithms, 1921

Central server models, multilevel aggregation, minimum relative entropy approach, 713
Chemical reactor, packed-bed type, non-linear inferential control, 1063
Cold standby system, two unit
  with correlated failures and repairs, 379
  with random change in units, profit evaluation, 367
Complex number systems, orthogonal estimation algorithm, 1011
Continuous-time system modelling using weighted-parabola-overlapping numerical integration method, 1361
Continuous-time systems in distributed-sensor networks decentralized smoothing algorithms, 1237
Continuous time-varying non-linear systems analysis using block-pulse expansions, 1201
Control
  design based on linear state function observer, 1179
  digital iterative learning type, of linear multivariable plants, learning rates, 1539
  integrated identification methodology for control and identification, 1825
  minimax, of maximal monotone differential inclusions in $\mathbb{R}^n$, 2253
  model-following, of linear proper non-minimum-phase systems, 1657
  non-slender flexible robot links, and modelling, 1571
  of 2D multi-link inverted pendulum, form of dynamic equations from choice of co-ordinate system, 2265
  of 2D uniform multi-link inverted pendulum, enumeration and identification of equilibrium states, 2291
  optimal feedback type, of non-linear systems, 2141
  parametrization approach to development of linear quadratic control laws, 2125
  sliding-mode type, and variable structure system observer as a dual problem for systems with non-linear uncertainties, 1991
  tracking type, of linear time-invariant descriptor systems, 1953
  weighted multi-model type, 145
Control systems, feedback-stochastic type, variance formulae, 489
Controllability and observability
  of a flexible beam model, 2349
  of distributed parameter system with unbounded control and observation, frequency domain conditions, 2369
Controllability and zeros of distributed parameter systems, 2359

0020–7721/92 $3.00 © 1992 Taylor & Francis Ltd.

Controllability of predicates and languages in discrete-event systems, 1777
Controller
adaptive, for minimum phase multi-input multi-output systems, 1527
digital, design for systems with transport lag, 2385
disturbance rejection self-tuning type, for class of MIMO non-minimum phase systems, 1549
extended, LQG, self-tuning, in mixed background 695
multi-rate, self-tuning, predictive, for multivariable system, 1347
Controllers
feedback type, 1423
'mean' type, performance index and random input space, 2219
Cranes, overhead type, electrochemical modelling, 2155
Cumulants, non-linearity detection of weakly non-linear dynamic systems, 1167

Data envelopment analysis, additive model, efficiency classification sensitivity, 789
Database, parallel hardware, optimal parameter estimation, 119
Deadtime compensation for non-linear processes with disturbances, 1761
Debugging models, imperfect, with fault introduction rate for software reliability assessment, 2241
Decentralized control, combined modal and singular perturbation approach, 741
Decentralized stabilization of large-scale systems with structured uncertainties, 425
Decision principle functors, binary-preference-structure-generating, universal maps, 1083
Decoupling problem, uniform, of linear time-varying analytic systems, via output feedback, 2037
Delayed control systems, design using simple frequency-domain criterion, 569
Description, absolute, of linear and non-linear processes, transformation to their incremental forms, 935
Descriptor systems
a class of differential game problems, 1731
eigenstructure assignment via state variable feedback, 99
time-invariant, linear, tracking control, 1953
Design
and zeros of control systems for distributed parameter systems, 1507
atomized organization structure, graph-theoretic approach, 109
digital controller for systems with transport lag, 2385
genetic, of linear multivariable feedback control systems using eigenstructure assignment, 1387
of control, based on linear state function observer, 1179
of delayed control systems using simple frequency-domain criterion, 569
of minimal-order state observers for time-varying multivariable systems, 581
optimal, of majority redundant systems, 443
recursive fixed-point smoother using covariance information in linear discrete-time systems, 2323
robust observer for nonlinear uncertain systems with LQ regulators, 1937
socio-technical, and evaluation of production systems, 1141
Differential algebraic equations, singular, geometric characterization, 167
Digital controller design for systems with transport lag, 2385
Digital filters, 2D, approximation, application of simulation, 593
Digital iterative learning control
of compensated linear multivariable plants, 1793
of linear multivariable plants, learning rates, 1539
Digital optimal regulator and tracker for stochastic time-varying systems, 2309
Digital simulation of system theoretic algorithms applied to image compression, 1155
Discrete cheap control problems, singular perturbation analysis, 57
Discrete events and general systems theory, 1403
Discrete-event systems, controllability of predicates and languages, 1777
Discrete multivariable systems
optimal pole shifting, 799
subject to non-linear time-varying unmodelled dynamics, robust stability, 1717
Discrete-time-control systems, forward-pass Bryson–Frazier smoother, 71
Discrete-time interconnected systems, robust decentralized MRAC, 1841
Discrete-time systems
generalized fixed interval smoothers, 1491
linear, use of covariance information for designing recursive fixed-point smoother, 2323
Discrete-time time-invariant linear systems, conversion into continous systems, 2063
Discrete variable structure systems with pseudo-sliding modes, analysis, 503
Disk duplexing, reliability analysis, 807
Distributed filtering, 1857
Distributed parameter system
with unbounded control and observation, frequency domain conditions of controllability and observability, 2369
with unbounded feedback, pole assignment problem, 473
Distributed parameter systems
zeros and controllability, 2359
zeros and design of control systems, 1057
Distributed systems, soft, real-time, load sharing, 1115
Disturbance decoupling via dynamic feedback, 683
Disturbance rejection self-tuning controller for class of MIMO non-minimum phase systems, 1549

Due date, common, relocation problems of maximizing new capacities, 1433
Dynamic systems, weakly non-linear, non-linearity detection using cumulants, 1167

Economic and social system applications of hybrid prediction models, 2377
Eigenstructure assignment
for descriptor systems via state variable feedback, 99
robust, with structured state-space uncertainty and unmodelled dynamics, 765
Electromechanical modelling of overhead cranes, 2155
Equipment replacement problem, 0–1 linear programming formulation, 2393
Estimating optimal parameters for parallel database hardware, 119
Estimator, of state, exponentially fast, robust, for some non-linear stochastic systems, 557
Evolution equations, non-linear, optimal control, 1245
Expert system
for detection, localization and correction of faults in a multi-loop launch vehicle guidance and control system, 605
for real-time control of ironmaking reactor, 17
for selection of phase equilibrium models, 885

Factorization of m-D polynomials in linear m-D factors, 1805
Failure modes, competing, in parallel system, optimal number of components, 449
Fault detection, localization and correction in multi-loop launch vehicle guidance and control system, expert system, 605
Fault simulation, parallel, on a multiprocessor, 2025
Feedback, output type, uniform decoupling problem of linear time-varying analytic systems, 2037
Feedback control systems, linear, multivariable, genetic design using eigenstructure assignment, 1387
Feedback controllers, 1423
Feedback stochastic control systems, variance formulae, 489
Feedforward technique in rendezvous problems for n identical simple-integral plants, 2091
Filter, Wiener type, reduced-order, 2411
Filtering, distributed, 1857
Filters, digital, 2D, approximation, application of simulation, 593
Forecasting, medium range, of monthly energy demand, via Walsh transform, 297
Frequency domain conditions of controllability and observability for distributed parameter system with unbounded control and observation, 2369
Functionals, non-linear, approximation via general orthogonal polynomials and application to control problems, 1261
Fuzzy set theory approach to modelling graded problem diagnosis and applications, 975

Game, differential, class of problems for descriptor systems, 1731
Graph-theoretic approach to atomized organization structure design, 109

Hereditary linear systems
stability, 915
with commensurate delays, two classes, relations between their stabilization properties, 1667
Hierarchical steady-state control of interconnected systems, double-loop-iterative-tracking-algorithm-based direct coordination, 1379
Hybrid suboptimal control of multi-rate multiloop sampled-data systems, 839

Identification
of linear multivariable time-invariant systems from samples of input–output data, algorithm, 419
of power network dynamic equivalents, structural approach, 1
of systems by neural network, 2171
recursive, of multi-variable interconnected systems, 987
Identification algorithm for multi-class linear and non-linear systems, 1603
Identification methodology, integrated, for control and identification, 1825
Image compression, digital simulation of system theoretic algorithms, 1155
Image segmentation, object background classification, 1903
Images, 3D range, of small industrial-like objects, segmentation, edge-based approach, 1449
Inclusions, maximal, monotone, differential, in $\mathbb{R}^N$, minimax control, 2253
Industrial processes, asymptotic normality analysis of estimation error of steady-state models, SISO case, 2003
Infinite-dimensional Carleman linearization, Lie series and optimal control of non-linear partial differential equations, 663
Interconnected systems
discrete-time, robust decentralized MRAC, 1841
hierarchical steady-state control, double-loop-iterative-tracking-algorithm-based direct coordination, 1379
multi-variable, recursive identification 987

Job flow management, flexible manufacturing system, generic software specification, system approach, 1889
Job release time, optimal, on stochastic single machine, 1593
Job waiting time reduction and machine interference minimization using bi-criterion algorithm, 1229

Knowledge transformed heuristic evaluation function for ship discharging scheduling, 631

Large-scale systems with structured uncertainties, decentralized stabilization, 425
Launch vehicle guidance and control system, multi-loop, expert system for detection, localization and correction of faults, 605

Laws of LQ control, development via control parametrization, 2125
Learning approach to qualitative multi-model control, 855
Learning control, digital, iterative
compensated linear multivariable plants, 1793
of linear multivariable plants, 1393
Learning rates in the digital iterative learning control of linear multivariable plants, 1539
Linear continuous-time systems, perturbation bounds, for root-clustering, 661
Linear–non-linear–linear system, non-linear analysis, 623
LISP program inference from examples, representative sample, 1321
LQ control laws, development via control parametrization, 2125
LQG self-tuning controller, extended, in mixed background, 695
Lyapunov function, exact determination, asymptotic stability domain, 1871
Lyapunov functions, explicit representations, for stable analytic systems, 677

M|G|m queueing systems, refining the diffusion approximation, 77
Machine, single, stochastic, optimal time release, 1693
Machine interference minimization and job waiting time reduction using bi-criterion algorithm, 1229
Maintenance frequency, economic, of transport fleet, determination, 655
Maintenance policies, optimal, with lead times and repair, 1299
Manufacturing, organizational and other socio-economic systems modelling, simplification of physical systems theory, 531
Manufacturing system
consisting of three assembly machines, optimal control, 2405
flexible, generic software specification for job flow management, system approach, 1889
Mappings, random, systems of, with a common fixed point, 2113
Maps, universal, for binary preference structure generating decision principle functors, 1083
Markov chains, large-scale, optimal Hankel-norm approximation approach to model reduction, 1289
Markov decision processes, multi-objective, discounted, with expectation and variance criteria, 903
Matrices, operational, block pulse type, set of, recursive computational algorithms, 1921
Matrix fraction descriptions, generalized realizations with special coordinate, 2197
Minimal-order state observer design for time-varying multivariable systems, 581
Minimal realization problem, of 2D systems to system of bilinear equations, algorithm, 545
Minimum energy control of linear time-invariant systems with input derivatives, 1191
Model
additive, of data envelopment analysis, efficiency classification sensitivity, 789
components in a shut-down system, reliability evaluation, 641
nuclear reactor automatic shut-down system, reliability evaluation, 649
of central server, multilevel aggregation, minimum relative entropy approach, 713
of flexible beam, controllability and observability, 2349
phase equilibrium type, selection by expert system, 885
Model-following control of linear proper non-minimum-phase systems, 1657
Model reduction
2D systems, state-space approach, 957
by least squares Padé method, 1559
using impulse-response gramians, frequency-domain approach, 1745
Modelling
and control of non-slender flexible robot links, 1571
approach based on fuzzy set theory to graded problem diagnosis and its application, 975
electromechanical, of overhead cranes, 2155
of continuous-time system using weighted-parabola-overlapping numerical integration method, 1361
of manufacturing, organizational and other socio-economic systems, physical system theory simplification, 531
of performance of integrated assembly line system with inspection stations and finite capacity local storages, approximation algorithm, 1637
stochastic, of *k*-out-of-*n* units family of systems, 1277
Models
for debugging, imperfect, with fault introduction rate of software reliability assessment, 2241
prediction, hybrid, application in economic and social systems, 2377
MRAC
non-linear, state-space approach, 833
robust, decentralized, of discrete-time interconnected systems, 1841
Multi-class linear and nonlinear system identification, 1603
Multi-model control, qualitative, using a learning approach, 855
Multivariable compensated linear plants, digital iterative learning control, 1793
Multivariable linear plants, learning rates in digital iterative learning control, 1539
Multivariable linear singular systems, recursive state and parameter estimation, 1785
Multivariable plants, linear digital iterative learning control, 1393
Multivariable system controller, multi-rate, self-tuning, predictive, 1347
Multivariable systems, bidiagonal realization, 249

Network
multiple loop type, reliability analysis, 2335
with randomly perturbed flow, optimal dynamic routing control, 221
Neural network for system identification, 2171

Neural network scheduling of power generation, 1977
Neural networks, Hopfield type, systems dynamics simulation, 1517
Non-archimedean infinitesimals, transcendentals and categorical inputs in linear programming and data envelopment analysis, 2399
Non-causal 2D and non-stationary simultaneous autoregressive model parameter adaptive estimation algorithm, spatially recursive, 1033
Non-linear analysis of a linear–non-linear–linear system, 623
Non-linear inferential control of packed-bed reactors, 1063
Non-linear MRAC, state-space approach, 833
Non-linear partial differential equations, infinite-dimensional Carleman linearization, Lie series and optimal control, 663
Non-linear processes with disturbances, deadtime compensation, 1761
Non-linear systems
  asymptotic observers, 435
  high-gain observers, 1475
Non-minimum phase plants, optimal control system synthesis, 291
Non-minimum-phase systems, linear, proper, model-following control, 1657
Nuclear reactor automatic shut-down system model, reliability evaluation, 649
Nuclear reactor system, output regulator problem, 1309

Object background classification, 1903
Observability and controllability
  of a flexible beam model, 2349
  of distributed parameter system with unbounded control and observation, frequency domain conditions, 2369
Observer
  high-gain, for non-linear systems, 1475
  of state, minimal order, design for time-varying multivariable systems, 581
  variable structure system type, and sliding-mode control, as dual of problem for systems with non-linear uncertainties, 1991
Observer-based control law, simple, for time lag systems, 1463
Observers, asymptotic, for non-linear systems, 435
Optimal control
  of a manufacturing system which consists of three assembly machines, 2405
  of class of non-linear evolution equations, 1245
  of dynamic routing in networks with randomly perturbed flows, 221
  predictive, generalized, advantages and limitations, 85
  system synthesis for non-minimum phase plants, 291
Optimal design of majority redundant systems, 443
Optimal feedback control of non-linear systems, 2141
Optimal number of components for a parallel system with competing failure modes, 449
Optimal pole shifting for discrete multivariable systems, 799
Optimal release time on stochastic single machine, 1693

Padé method, least squares, for model reduction, 1559
Parallel fault simulation on a multiprocessor, 2025
Parallel system with competing failure modes, optimal number of components, 449
Parameter estimation
  and recursive state estimation, linear multivariable singular systems, 1785
  of complex number-systems, prediction-error estimation algorithm, 1533
Parameter estimation algorithms for bilinear and non-linear systems using Walsh functions, recursive approach, 283
Parameter estimation error and asymptotic normality analysis of steady-state models, for industrial processes, 2003
Parameter identification algorithm, modified recursive least-squares type, 187
Pendulum, inverted, multi-link, 2D
  form of dynamic control equations from choice of coordinate system, 2265
  uniform, enumeration and identification of equilibrium control states, 2291
Performance modelling of integrated assembly line systems with inspection stations and finite capacity local storages, approximation algorithm, 1637
Perturbation analysis, singular, of discrete cheap control problems, 57
Perturbation bounds for root-clustering of linear continuous-time systems, 661
Pole assignment problem of a distributed parameter system with unbounded feedback, 473
Pole shifting, optimal, for discrete multivariable systems, 799
Polynomial families, diamond type, robust stability and robust strict positive realness of rational function families, 235
Polynomials
  m-D, factorization in linear *m*-D factors, 1805
  with complex coefficients, diamond families of, robust stability, 1371
Power generation scheduling by neural network, 1977
Power network, dynamic equivalents identification, structural approach, 1
Predator–prey, three species with cyclic loop, permanence, 1001
Prediction models, hybrid, application in economic and social systems, 2377
Predictive optimal control, generalized, advantages and limitations, 85
Pricing, monopolistic-peak-load-type, when demand is dynamic, 457
Production-inventory model, integrated, for multi-products on a single facility, 273
Production systems, socio-technical design and evaluation, 1141
Profit evaluation of a two unit cold standby system with random change in units, 367

Programming
chance-constrained, semi-infinite relaxation of joint chance constraints, zero-order stochastic decision rules, 1051
fractional, sensitivity analysis, tolerance approach, 823
linear, and data envelopment analysis, non-archimedean infinitesimals, transcendentals and categorical inputs, 2399
Programming formulation, 0–1 linear type, for solving an equipment replacement problem, 2393
Pseudo-sliding-mode discrete variable structure systems, 503
Pulse-width modulated system, continuously variable, analysis, via Walsh functions, 151

Queueing networks with acknowledgment delay, window-flow-controlled, performance analysis, 393
Queueing system, $M/G/m$ type, with group arrivals, refining the diffusion approximation, 127

Reactor, for ironmaking, expert system for real-time control, 17
Real-time control of ironmaking reactor, expert system, 17
Recursive computational algorithms for a set of block pulse operational matrices, 1921
Recursive state and parameter estimation of linear multivariable singular systems, 1785
Redundant systems, optimal design of majority redundant systems, 443
Regulator
digital, optimal, and tracker, for stochastic time-varying systems, 2309
output type, problem of a nuclear reactor system, 1309
Regulators, globally stable saturated state feedback type class, 1965
Reliability analysis
of some duplex disk systems, 807
on the multiple-loop network, 2335
Reliability characteristics of two (double component) systems with bivariate exponential lifetimes, comparison, 135
Reliability evaluation of a shut-down system
component modes, 641
system model, 649
Relocation problems of maximizing new capacities under a common due date, 1433
Rendezvous problems for n identical simple-integral plants, feedforward technique, 2091
Resource allocation problem, two-level stochastic control with periodic coordination, 263
Riccati equation, singularly perturbed matrix difference type, solution, 403
Robot links, flexible, non-slender, modelling and control 1571
Robots, multiple, coordination, supervisory control, 1703
Robust decentralized MRAC of discrete-time interconnected systems, 1841
Robust eigenstructure assignment with structured state-space uncertainty and unmodelled dynamics, 765
Robust observer design for nonlinear uncertain systems with LQ regulators, 1937
Robust stability
of diamond families of polynomials with complex coefficients, 1371
of discrete multivariable systems subject to non-linear time-varying unmodelled dynamics, 1717
Robust exponentially fast state estimator for some non-linear stochastic systems, 557
Root-clustering of linear continuous-time systems, perturbation bounds, 661

Sampled-data systems, multi-rate multi-loop, hybrid suboptimal control, 839
Sampling efficiencies, relative, in complex system simulation, 2231
Satellite, spinning, stable fraction approach and attitude control using a gyrotorquer, 311
Saturated state feedback regulator linear system, global stability, 37
Scheduling ship discharging via knowledge transformed heuristic evaluation function, 631
Sensitivity analysis
in fractional programming, tolerance approach, 823
of stochastic dynamical systems, 2187
Sensitivity of efficiency classifications in the additive model of data envelopment analysis, 789
Sensors in distributed network, continuous-time systems, decentralized smoothing algorithms, 1237
Ship discharging scheduling via knowledge transformed heuristic evaluation function, 631
Shut-down system, reliability evaluation
components models, 641
system model, 649
Simulation
applied to the approximation of 2D digital filters, 593
of complex systems, relative sampling efficiencies, 2231
Singular controls in optimal control problems, necessary conditions for optimality, 1335
Singular perturbation analysis of discrete cheap control problems, 57
Singular systems, state estimation, 517
Sliding mode control and variable structure system observer as dual problem for systems with non-linear uncertainties, 1991
Smoother
forward-pass Bryson–Frazier type, in discrete-time systems, 71
recursive, fixed-point, design using covariance information in linear discrete-time systems, 2323
Smoothers, generalized, fixed-interval, for discrete-time systems, 1491
Social and economic system applications of hybrid prediction models, 2377
Socio-technical design and evaluation of production systems, 1141
Software, generic specification for flexible manufacturing system job flow management,

system approach, 1889
Software reliability assessment, imperfect debugging models, with fault introduction rate, 2241
Stability
global, of class of linear systems with saturated controls, 37
of a class of hereditary linear systems, 915
robust, of polynomial families and robust strict positive realness of rational function families, 235
Stabilization
decentralized, of large-scale systems with structured uncertainties, 425
of time delay systems containing saturating actuators, 615
of uncertain linear system via observer based state feedback, 411
State estimation for a class of singular systems, 517
State-space approach
for model reduction of 2D systems, 957
to non-linear model reference adaptive control, 833
Stochastic control, two-level, with periodic co-ordination for a resource allocation problem, 263
Stochastic control systems, feedback-type, variance formulae, 489
Stochastic decision rules, zero-order, semi-infinite relaxation of joint chance constraints in chance-constrained programming, 1051
Stochastic dynamical systems, sensitivity analysis, 2187
Stochastic modelling of k-out-of-n units family of systems, 1277
Stochastic non-linear systems
parameter estimation using orthogonal least-squares algorithms, 1019
robust exponentially fast state estimator, 557
tracking control using path cross-entropy and Fokker–Planck equation, 1101
Stochastic time-varying systems, digital optimal regulator and tracker, 2309
Supervisory control for co-ordination of multiple robots, 1703
Synthesis of optimal control systems for non-minimum phase plants, 291
System dynamics simulation of Hopfield neural networks, 1517
Systems theory, general, discrete events, 1403

Target, manoeuvring, tracking using input estimation at high measurement frequency, 871
Target motion measurement in image sequence, 207
Time-delay systems
containing saturating actuators, 615
digital controller design, 2385
Time-invariant linear systems with input derivatives, minimum energy control, 1191
Time-lag systems, observer-based control law, 1463
Time-varying linear systems, determinant and statistical analysis via block-pulse functions, 1213
Time-varying unmodelled dynamics, non-linear, of discrete multivariable systems, robust stability, 1717
Topological approach for abstract systems, 329
Tracker, digital, optimal, and regulator, for stochastic time-varying systems, 2309
Tracking a manoeuvring target using input estimation at high measurement frequency, 871
Tracking control
of linear time-invariant descriptor systems, 1953
of non-linear stochastic systems by using path cross-entropy and Fokker–Planck equation, 1101
Tracking system, automatic image type, target motion measurement, 207
Transport fleet, determining economic maintenance frequency, 655
Trouble diagnosis, modelling approach based on fuzzy set theory, 975

Uncertain linear system stabilization via observer based state feedback, 411
Uncertain nonlinear systems with LQ regulators, robust observer design, 1937

Vehicle antilock braking and traction control theory, 351

Zeros
and controllability of distributed parameter systems, 2359
and design of control systems for distributed parameter systems, 1507
